

## Number of Computers

One July day in 2015, while inspecting the Kim Jong Thae Electric Locomotive Complex, the respected Comrade **Kim Jong Un** paid close attention to the operation of sci-tech learning spaces.

At the passenger train workshop, he halted in front of its sci-tech learning space.

An official of the complex said to him: As instructed by you, we have built up this sci-tech learning space.

**Kim Jong Un** recalled the number of computers that he had seen there during his visit at the beginning of the year.

The officials in his company were surprised. They did not imagine that as he was busy dealing with all state affairs, he could remember the number of computers in that space.

They now realized how much he was concerned about it, a fact implying that he intended to ensure that the complex would achieve steady advance and growth on the strength of science and technology.

He inquired in detail about how the employees were learning under the distance education system after finishing their work in shifts, and also about how sci-tech publications were being distributed. He then told an official that the complex should be effective in running the sci-tech learning space with a view to training competent personnel.
