

Implanting Patriotism in Scientists

One day, Chairman **Kim Jong Il** watched programs developed by various universities and specialized units.

Expressing great satisfaction after seeing the programs for hours, he said that our scientists and technicians have done a great job and that those programs on display were great.

The officials and scientists were excited by his high praise, as the development of programs badly needed for putting the national economy on a modern, IT basis was unthinkable apart from his wise leadership.

At first, they conducted researches in various ways to promote program development successfully, and organized competitions between units and sectors, but there was no big progress in the development.

Kim Jong Il, who acquainted himself with their work, said he would see the completed programs and took relevant measures.

His great trust and affection served as a source of strength and wisdom for scientists, and they finally succeeded in developing programs.

Looking at them in deep thoughts, **Kim Jong Il** indicated the current orientation of program development, and stressed: Our scientists and technicians should serve the people and become the foundation for the development of science and technology in the country. They should set as seeds for research the sci-tech matters conducive to the prosperity and development of the country. Only when the development of programs is geared to serving the country and the people, can it make a substantial contribution to the prosperity and development of the country and the wellbeing of the people.

Under the wise leadership of **Kim Jong Il** who implanted the ennobling patriotism in our scientists and technicians, a large contingent of patriots and scientists, who faithfully serve the country and the people with the faith that their scientific research is for the sake of the country and the people, have grown up on this land.
