

Teaching a Methodology

At midnight of one July day in 2018, the respected Comrade **Kim Jong Un** looked round the Onpho Working People's Holiday Camp in Kyongsong County, and unfolded a plan for renovating the holiday camp.

He then asked the senior official of the county about the situation of the regional industry in the county.

After listening to his answer, **Kim Jong Un** said: The county should effectively push ahead with the project of renovating the condiments factory. If the county is to put production at its regional-industry factories including the condiments factory on a regular footing and attain the goal of renovating them, it should enlist the technicians and skilled workers in it. Science and technology are the basic of the necessary resources, and technicians and skilled workers, the main forces in developing the county.

At that time the county officials had thought that they had no option but to receive the assistance of technical forces by the province, even if they could solve other problems in renovating the condiments factory by the county itself.

Kim Jong Un put an end to their way of thinking and indicated the methodology for the county to advance along with the era of making a leap forward.
